MANAGEMENT INFORMATION SYSTEMS

University of Northern Iowa David W. Wilson College of Business

https://business.uni.edu/management

About The Major

Management Information Systems (MIS) is the study of how innovative technologies are used to achieve business goals. Students in this program accelerate their understanding of information technology, organizational communications, and project management. MIS professionals are the "bridge" between business needs and technology. This means an MIS professional will have to understand how to dig deep into how technology works, solve problems, report and communicate on findings.
